

Position: Current Model Licensing Practices are Dragging Us into a Quagmire of Legal Noncompliance

Moming Duan, Mingzhe Du, Rui Zhao, Mengying Wang, Yinghui Wu, Nigel Shadbolt, Bingsheng He

01 Fragmented model licenses are causing systemic noncompliance

Fragmented model licenses are causing systemic noncompliance
<https://www.modelgo.li/>

02 We map HF at scale to detect compliance conflicts

- Scope: 151k models, 147k edges
- Edges: finetune/adapter/quant/merge
- Logic: conflict/compliance flags
- Signals: red merge hotspots
- Method: replicable crawl + rules
- Look for: red hubs; edge flags

03 PEFT-driven reuse creates dense, cross-license dependency chains

- PEFT multiplies cross-license reuse
- Crawl: 151,302 models; 146,818 edges (Dec 2024)
- Edge types: finetune, adapter, quant, merge
- Chains often cross incompatible terms
- Central question: do downstreams stay compliant?
- Observe: dense finetune/adapter clusters across licenses

04

General-purpose licenses mismatch ML; Llama terms propagate downstream duties

- OSS and CC licenses show mismatch with model weights and ML workflows
- Model specific licenses better cover outputs and patents than OSS or CC
- Llama family terms appear permissive but propagate obligations downstream
- Adoption trends show **rising mismatch** with more Apache and null licenses
- AGPL and GPL are clear yet create **conflicts** with behavior limits
- Observe: Apache/null rise; model-specific cover outputs/patents.

05

Derivative triggers and merges concentrate real conflicts

- Derivative triggers include finetune, quantization, and merge across releases
- Conflicts concentrate in Llama merges and FSF freedom incompatibilities
- Observed conflict rate reaches 2.2 percent among licensed models with edges
- Behavior restrictions create **GPL conflicts** even when relicensing is allowed
- Transitive effects remain limited but still **risky** in hot neighborhoods
- Observe: Llama-merge spikes; GPL vs behavior limits.

06

ModelGo Licenses reduce ambiguity and conflict risk

Grant of Rights to Licensed Materials	Use, Reproduce and Distribute Licensed Materials	✓
	Create Derivative Materials	✓
	Sub-License Licensed Materials	✗
	Revocable License to Licensed Materials	✗
	Ownership of Derivative Materials with Licensor	✓
Grant of Rights to Derivative Materials	Commercial Use of Licensed Materials	✓
	Use and Reproduce Derivative Materials	✓
	Distribute Derivative Materials	✓
	Sub-License Derivative Materials	✗
	Revocable License to Derivative Materials	✗
Grant of Rights to Output	Ownership of Derivative Materials with Licensee	✗
	Commercial Use of Derivative Materials	✗
	Right to Distribute Output if Indicate Notice of AI-Generated Content	✓
Responsible AI Requirements relating to Distribution of Licensed Materials and/or Derivative Materials	Commercial Use of Output	✗
	Use Restrictions (RAI) on Licensed Materials, Derivative Materials and Output	✗
	Provide a Copy of Original License	✓
	Retain Original Attribution Notice when Distributing Licensed Materials	✓
	Retain Original Attribution Notice when Distributing Derivative Materials	✓
	Indicate Modifications when Distributing Derivative Materials	✓
	Require Third Party Recipients to Comply with Use Restrictions (RAI) on Distributed Licensed Materials, Derivative Materials and Output	✗
	Disclosure of Distributed Licensed Materials and/or Derivative Materials in Source Code Form	✗
	Licensing Distributed Derivative Materials on Same Terms as License	✓
		✓

- Modular elements include BY, NC, ND, RAI, and OS with MG0 permissive
 - Model Sheet summarizes grants and restrictions for quick checks
 - Selected variants are submitted to OSI and gaining adopters
- Design aims for **clarity** and **reusability** across ecosystems
 - Co drafting with experts reduces **misinterpretation** risk

07

Operational steps make obligations explicit and checkable

- Behavior use clauses increase GPL incompatibility and supply chain friction
 - Data licenses do not copyleft weights so model license choice is separate
 - Provenance tooling and automated analysis strengthen compliance checks
- BOM alignment makes obligations **explicit** and reviewable
 - Rising reuse intensity raises **complexity** for maintainers

- **Takeaway: Adopt MGLs + BOM/provenance to cut conflicts and scale compliant reuse.**
- Evidence: mismatch/proliferation; 2.2% conflicts; hotspots in Llama merges and FSFf.
- Workflows should make obligations **explicit** and **\checkable**
- Standard choices improve **clarity** and downstream **\compliance**

	# of Models of Conflicts	# of Derivatives of Conflicts
La2E-license	995	13
La3E-license	674	429
FSFf	98	0
La3E-merge	79	2
CCf	54	54
ND	35	1
La2E-merge	11	0
